### **~ What is Body Wrapping?**

Reducing weight loss, exercise and cellulite control has always been a major problem. The body wrap is an advanced development that works on shrinking the adipose tissue of fat called Cellulite, wich is found directly below the surface of the skin. Body Wrapping eliminates toxins and impurities that have built up in the body, and helps to rid the body of Cellulite. Smooths, tightens, and softens skin.

The Body Wrap process involves wrapping the body with cotton and elastic strips of cloth, similar to an ace bandage, which have been soaked and heated to a temperature of 150 degrees in our special wrap formula. The wraps are applied tightly to areas needing treatment for Cellulite and inch loss, lightly to areas where only skin-tightening is desired. Almost anyone should be able to have a wrap, but if you have a medical problem check with your doctor first.

### **~ How does the Body Wrap work?**

The concept of the Body Wrap is such that it improves those areas of your body that you want to work on the most. Wherever your tissue is softest and flabbiest, the "wrap" will firm, tone and reduce more than the averages. Many people are "wrapped" for the detoxification benifits, as well as inch loss and reshaping. Impurities are flushed from the body through the body's natural waste system by drinking 8 to 10 glasses of water per day.

### **~ How long does it take?**

Allow a total of 2 hours for the body wrap. Thirty minutes is spent measuring, wrapping up the body and re-measuring. You must stay in the wraps for one hour to achieve the best inch loss. It is important to stay warm during the complete process also.
